Mail form with money order

(Please include \$5.00 shipping and handling, at this time we are only able to except USA orders)

Mini Ider Kit

preprogrammed Mini chip \$9.99 quantity []

Timer length (0000 – 9999 seconds) _____

Enter call message (max = 127 characters): _____

Mini Ider circuit board \$5.00 quantity []

Serial Ider Kit

preprogrammed Serial chip \$14.99 quantity []

Serial Circuit boards:

Banding circuit board is available for \$9.99 quantity []

The Banding board is laid out for both chips, as pictured on our site. Because the Serial Ider is designed to work with a simple serial terminal program, like Hyper Terminal, the Max232 takes the hope and pray out of programming your message. There are some short cuts which try to eliminate the Max232 chip. They are not dependable on all computers all the time.

If you already have a Max232 chip board or if your prefer to only install the PIC Ider at the repeater site and leave your Max232 chip board at home. You can order a NEW Ider board from Far Circuits, [Far Circuits website](#) , which is a PIC chip only board. Check Far Circuits site for the NEW Ider board. Their old 16F84 board will not work with the new 16F627 circuitry.
